MARINE ALIGNMENT

EXTENDED VISIBILITY

The visibility check module works according to the SOLAS MSC 99(73), Reg. 22.

With this feature you are able to determine which stacks are obstructing the line of sight and in which stacks you have spare capacity.

Colour coding gives you a quick overview of where the problems are located, and tells you where you can put extra 1, 2 or more containers on top without obstructing the line of sight.

A side view with the load profile can be opened to provide additional understanding of the loading situation.

You can select different visibility criteria; SOLAS, SBG, Panama Canal Full Load and Panama Canal Ballast.

Developed with our customers world-wide, Easeacon is made in Denmark.
